Social Contracts Theory: An Examination of Corporate Governance and Stakeholder Relationships This article delves into the concept of Social Contracts Theory, examining the relationships between corporations, stakeholders, and societal expectations. The theory posits that a corporation's primary goal is to manage stakeholder relationships effectively, ensuring long-term survival and success. References: 1. Donaldson, T., & Preston, L. E. (1995). Various studies on corporate governance have been conducted in relation to earnings management in industrial and commercial sectors. Notable references include "Earnings Management of Industrial and Commercial Tunisian Sectors" by a journal focusing on economics, finance, and administrative science. Additionally, research has been carried out on corporate governance and shareholder value maximization from an African perspective by Kyereboah-Coleman. Another study explores corporate ownership worldwide as reported in the Journal of Finance. Furthermore, a publication in Corporate Governance: The International Journal of Business in Society examines family ownership, board committees, and firm performance with evidence from Hong Kong. Cooper (Eds.), Advances in Mergers and Acquisitions (Vol. 1, pp. 119-155). The penetration of managerial ideology into everyday life, including infant care advice, is an aspect of cultural hegemony that has been shaping societal values and norms since the late 19th century. This phenomenon is closely tied to broader changes in dominant ideas, values, and norms surrounding work and consumption. The essay explores four ways in which infant care advice reflects these changing aspects of culture: (1) socialization into production and consumption; (2) women's roles in the workforce and home; (3) metaphors of production and consumption; and (4) distribution of expert knowledge. The analysis examines three eras of infant care advice in the 20th century, alongside corresponding periods of managerial cultural hegemony.
